Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Objections

1. Claim 10 is objected to because of the following typographical error: "optionally".
Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Hugo (US 6,194,484).

Claims 1 and 16-18: Hugo teaches a coating material comprising first IR reflective flakes (i.e. (b) component) and second IR transparent particles; that is particles that have a degree of transmission in the IR region (i.e. (c) component. See Hugo, col. 2, lines 15-50. The flakes and particles are present in a coating material comprising a binder (col. 2, lines 10-14). Therefore, the binder necessarily causes second particles to coat on the surface of the first flakes.

Claim 2 is deemed met by inherency as the materials are IR reflective.

Claims 3-4: Chromium and aluminum as materials for the core flakes are taught at col. 3, lines 37-42.

Claims 5-9 and 13: See col. 2, lines 15-20.

Claims 10-12: Col. 2, lines 60-65.

Claim 14 is deemed met by inherency.

Claim 15: col. 3, line 65 to col. 4, line 7.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hugo (US 6,194,484) as applied to claims 1-18 above, and further in view of the discussion herein.

Hugo discloses the coating material of the claimed invention as discussed in section 3 above. With regard to the dimensions of the flakes and particles in the coating composition, one having ordinary skill in the art would have found it obvious to adjust these parameters for optimal results through routine experimentation. With regard to the materials for the core flakes, selection of materials to form samples that best serve the purpose of the coating composition depending of the object to be coated would appear to be within one of ordinary skill in the art.
